DETAILED ACTION

Election/Restrictions

Applicant's election of claims 1-9 and 15-22 in the reply filed on December 28, 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 9 and 15-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Huang et al. (US 6507119), hereinafter Huang.

Regarding claim 1, Fig. 3C of Huang shows a flip-chip substrate [120], wherein at least a chip [110] is attached to the flip-chip substrate and the chip has an active surface [110a] with a plurality of bonding pads [111] and each bonding pad has a bump [130] thereon, the substrate comprising:

a plurality of contact pads [122] embedded in the substrate, wherein locations of the contact pads are arranged corresponding to locations of the bonding pads on the chip, wherein

Art Unit: 2811

any two contact pads align with their two corresponding bonding pads at a melting point of the bumps (through soldering the balls to the corresponding pads; col. 1, lines 59-64).

Also note that "at the melting point" is a process designation, understood to give rise to a doped region, and would thus not carry patentable weight in this claim drawn to a product. See *In re Thorp*, 227 USPQ 964 (Fed. Cir. 1985).

Regarding claim 2, Fig. 3C of Huang shows the substrate (a ceramic substrate; col. 5, line 5) has a coefficient of thermal expansion greater than that of the chip (col. 2, lines 14-16).

Regarding claim 3, Fig. 3A of Huang shows a distance between any two bonding pads is greater than a distance between their two corresponding contact pads at room temperature (before the bonding of the chip to the substrate).

Also, note that claim 3 recites an intermediate structure of the device recited in claim 1.

Regarding claim 4, Fig. 3C of Huang shows the contact pads are arranged in arrays.

Regarding claim 5, Fig. 3C of Huang shows the bonding pads and the bumps are arranged in arrays.

Regarding claim 9, Fig. 3C of Huang shows the substrate has a plurality of cavities and each contact pad is exposed by one cavity.

Regarding claim 15, Fig. 3C of Huang shows a chip [110] for bonding with a substrate [120], wherein the substrate has a plurality of contact pads [122] and a plurality of cavities, each contact pad being exposed by one cavity, the chip comprising: a plurality of bonding pads [111] on an active surface [110a] of the chip with a bump [130] on each bonding pad, wherein any two of the bumps are aligned to the corresponding two cavities on the substrate.

Art Unit: 2811

Regarding claim 16, Fig. 3C of Huang shows the substrate (a ceramic substrate; col. 5, line 5) has a coefficient of thermal expansion greater than that of the chip.

Regarding claim 17, Fig. 3A of Huang shows a distance between any two bumps is greater than a distance between their two corresponding cavities at room temperature (before the bonding of the chip to the substrate).

Also, note that claim 17 recites an intermediate structure of the device recited in claim 15.

Regarding claim 18, Fig. 3C of Huang shows the cavities are arranged in arrays.

Regarding claim 19, Fig. 3C of Huang shows the bumps are arranged in arrays

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6-8 and 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Huang in view of Hilton (US 6737752).

Regarding claims 6-8, Huang discloses the most aspect of the pending claim except a flip-chip package wherein one of the contact pads at the center of the contact pad array serves as a first expansion reference mark and one of the bonding pads at the center region of the bonding pad array corresponding to the first expansion reference mark serves as a second expansion reference mark such that the first expansion reference mark on the substrate is aligned to the

Art Unit: 2811

second expansion reference mark on the chip. Hilton discloses a flip-chip package wherein one of the contact pads at the center of the contact pad array serves as a first expansion reference mark and one of the bonding pads at the center region of the bonding pad array corresponding to the first expansion reference mark serves as a second expansion reference mark such that the first expansion reference mark on the substrate is aligned to the second expansion reference mark on the chip (col. 4, line 39 – col. 6, line 28).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to incorporate the teachings of Hilton into the device of Huang in order to have the center portion of the contact pads and the bonding pads a reference mark during the alignment process to achieve stronger bonding.

The subject matters regarding claims 20-22 have been discussed in claims 6-8.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Junghwa M. Im whose telephone number is (571) 272-1655. The examiner can normally be reached on MON.-FRI. 8:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie C Lee can be reached on (571) 272-1732. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
